CSE 5324

SOFTWARE ENGINEERING PROJECT

TITLE: Auto TasX

<u>TEAM - 7</u>

1) Harikrishna Bokksum   -   1001096002
2) Apeksha Bhat   -   1000981003
3) Meghana Anoop   -   1000981002
4) Kaustubh Mohgaonkar   -   1001101770
5) Michael Ho   -   1001135968

INTRODUCTION:

The purpose of this project is to develop an application that allows the user to automate his android device which usually requires user intervention based on the user's location.
KEY FEATURES:

- Lollipop Material design Interface.
- Location based automation.
- Customizable "where".
- Location based customizable reminders.
- Multiple actions for locations.

USE CASES:

Scenario 1: Automate phone silent

Select a location

Select Silent feature

Save profile

Scenario 2: Automating Reminder

PROTOTYPE:

COMPETITORS:

- Geofence Tracker tasker
- Locotext
- Smart Silence

WHY Auto TasX?

There are a few applications like locoText , Smart Silence each of which includes only one of the features included In our application. The Geofence Tracker Tasker although does most of the functionalities included in our application ,it does not have the "Location based Reminder" feature.

VISION AND BUSINESS CASE:

Minimizing user intervention in performing repeated tasks by helping him achieve these task automatically through the application.

- Convenient
- Material Design UI
- Phone automation

TOOLS:

- Development IDE: Eclipse ADT
- Database: Parse Database
- Version Control: GitHub

RISKS : MITIGATIONS

- Delay or inconsistency in getting most recent location data**:** Avoiding inconsistency by using Google's fused location API .
- Implementing multiple actions for each location**:** Initially start with one action for a location and on progress carry forward with multiple actions through the iterations
- Background activity getting killed because of memory leak**:** The problem is that under certain circumstances Android 5.0 and 5.0.1 leak memory, and when the leak has reached a critical point then Android tries to compensate by forcibly closing apps to free up resources.
